

Synoptic Data Viewer Weather Insights for Emergency Management

FEATURES

- Real-time data: view data as soon as it's reported.
- View your data alongside other networks.
- Create Dashboards and Notifications to stay ahead of adverse conditions.
- View radar, watches and warnings, and storm reports together with observation data.
- Monitor station assets from the platform and address concerns quickly.

Empower Decision-Making with Weather & Environmental Preparedness Tools

Having access to real-time weather data is critical to support decision-making and situational awareness. The Synoptic **Data Viewer** brings observations from multiple sources together in one platform, allowing you to quickly and easily visualize conditions. Access to current and quality-controlled information means you can make faster, better-informed decisions.

For more detailed monitoring and data hosting, **Dashboards and Notifications** tools help you track localized conditions, receive alerts when designated thresholds are met, and easily monitor your own data assets. Create customized dashboards to monitor specific areas or parameters, and set up notifications to alert you and/or staff when critical stages are met, allowing for immediate action to be taken.

About Synoptic

When you need reliable access to weather and environmental data, including your own network, Synoptic is your trusted partner. Collecting and viewing data from multiple sources is time-consuming and usually means looking in more than one place. Synoptic is the only company that offers a comprehensive and easily accessible hub for weather and environmental data! When you need to manage your network, make critical decisions, or simply manage day-to-day operations, our platform empowers you with real-time and historical data to move forward confidently.

For over 20 years, Synoptic has been offering solutions for government, commercial, and academic users to help them protect lives, property, and the environment.
